

What About African Americans and High Blood Pressure?

The prevalence of high blood pressure in African Americans is among the highest in the world. High blood pressure affects more than 40 percent of African Americans. It also develops earlier in life in blacks than in whites and is usually more severe. High blood pressure usually has no symptoms. That's why it's called the "silent killer." The only way to know if your blood pressure is high is to have your doctor check it regularly.

What's blood pressure?

Blood pressure is the pressure of the blood against the walls of the arteries. Blood pressure results from two forces. One is created by the heart as it pumps blood into the arteries and through the circulatory system. The other is the force of the arteries as they rest between heart beats.

What should my blood pressure be?

Normal blood pressure is below 120/80mm Hg. The top number (systolic) is the pressure when the heart beats. The bottom number (diastolic) is the pressure when the heart rests between beats. If you're an adult with a blood pressure of 120 to 139/80 to 89, you have pre-hypertension. If your blood pressure is 140/90 mm Hg or higher, you have high blood pressure. If you have high blood pressure and diabetes or kidney disease, your doctor will want your blood pressure to be at least lower than 130/80 mm Hg.

What causes high blood pressure?

No one knows for sure. In fact, most high blood pressure cases have no known cause. Factors that may lead to high blood pressure in 5 to 10 percent of cases include kidney disease, tumors of the adrenal glands near the kidneys and narrowing of certain arteries.

How often should I have my blood pressure checked?

Your doctor may take several readings over time before making a judgment about your blood pressure. Checking your blood pressure is quick and painless. You can have it done in a doctor's office, hospital, clinic, nurse's office, pharmacy, company clinic or health fair. Your doctor will tell you how often you should have it checked.

How does high blood pressure affect me?

It can damage blood vessels in various parts of your body. And the longer it's left untreated, the more likely organs such as your heart, brain, kidneys or eyes will be damaged. This can lead to heart attack, stroke, heart failure, kidney disease, erectile dysfunction, and loss of vision.

Can high blood pressure be cured?

No. But it can be managed. You **can't** control these risk factors:

- **Race** — Blacks develop high blood pressure earlier in life and their average blood pressures are higher than the blood pressures of whites.
- **Heredity** — A tendency to have high blood pressure runs in families.
- **Age** — In general, the older you get, the greater your chance of developing high blood pressure.
- **Sex** — Men tend to develop high blood pressure earlier in life than women.

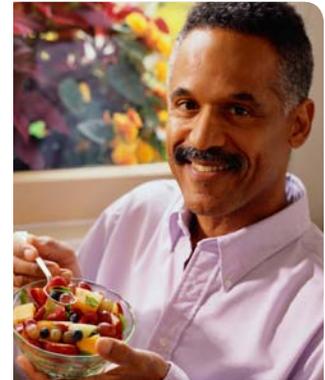

But you **can** manage some risk factors:

- Being overweight or obese
- Eating an unhealthy diet and too much salt
- Drinking too much alcohol
- Lack of physical activity

What can I do about my blood pressure?

You can:

- Lose weight if you're overweight.
- Eat healthy foods low in saturated fat, trans fat, cholesterol and salt.
- Eat a diet that emphasizes fruits, vegetables and low-fat dairy products.
- Increase your daily physical activity.
- Limit alcohol to no more than one drink a day if you're a woman or two drinks a day if you're a man.
- If you smoke, stop. If you don't smoke, don't start. Avoid exposure to second-hand smoke.
- Take medicine the way your doctor tells you.

HOW CAN I LEARN MORE?

- 1 **Talk to your doctor, nurse or other healthcare professionals.** If you have heart disease or have had a stroke, members of your family also may be at higher risk. It's very important for them to make changes now to lower their risk.
- 2 Call **1-800-AHA-USA1** (1-800-242-8721), or visit **heart.org** to learn more about heart disease.
- 3 For information on stroke, call **1-888-4-STROKE** (1-888-478-7653) or visit us at **StrokeAssociation.org**.

Do you have questions for the doctor or nurse?

Take a few minutes to write your questions for the next time you see your healthcare provider.

For example:

How is high blood pressure treated?

What type of diet would be most helpful?
